---

Just in case you missed this in the news: The Massachusetts Institute of Technology has announced to the world that it has developed glass windows that can produce solar energy ten times more efficiently than current solar energy panels.

In three years time will we start to see the windows in our houses, offices, shops and public buildings replaced to enable our buildings to be green, cheap, and efficient energy producers?

Time will tell.

To find out more on this technology of the present navigate via this link: [MIT opens new window on solar energy&nbsp;](#)
